Comparison of memory fMRI response among normal, MCI, and Alzheimer's patients

In the article "Comparison of memory fMRI response among normal, MCI, and Alzheimer's patients" by M.M. Machulda et al. (*Neurology* 2003;61:500–506), there are errors in the first two sentences in the Results section of the abstract; they should read as follows: "Results: Medial temporal lobe activation was greater in normal subjects than MCI and AD patients ($p = 0.03$ and $p = 0.04$). There was no difference between AD and MCI patients in fMRI memory performance."
