Corrections

Understanding of informed consent by demented individuals

In the article “Understanding of informed consent by demented individuals” (*Neurology* 2003;61:1662–1666) by Buckles et al., there is an incorrect entry in Table 1 on page 1663. The last row for the Mini-Mental Status Exam (MMSE) scores under the column marked “CDR 0: no dementia” should read 28.6 ± 1.6 instead of 38.6 ± 1.6 . The publisher apologizes for the error.

Late onset Charcot–Marie–Tooth 2 syndrome caused by two novel mutations in the *MPZ* gene

In the article “Late onset Charcot–Marie–Tooth 2 syndrome caused by two novel mutations in the *MPZ* gene” (*Neurology* 2003;61:1435–1437) by Auer–Grumbach et al., the designation for the mutation N60H is incorrect. The correct designation for this mutation is D60H. The authors regret the error.

Molecular profiles of inflammatory myopathies

In the article “Molecular profiles of inflammatory myopathies” (*Neurology* 2002;59:1170–1182) by Greenberg et al., the authors have learned that certain tissue samples (10 of 45) used in their research were not collected and used in full regulatory compliance with institutional review board protocols, in contravention to a statement made in the article. The authors note that subjects provided written informed consent, however. The authors have also learned that prospective IRB review had not been sought to study certain samples (6 of 45) from the hospital pathology laboratory. All clinical use of these tissues, from clinically indicated muscle biopsies, had been completed prior to the research. The authors regret these errors and oversights.
