Initial diagnoses given to persons with the fragile X associated tremor/ataxia syndrome (FXTAS)

In the article "Initial diagnoses given to persons with the fragile X associated tremor/ataxia syndrome (FXTAS)" (*Neurology* 2005;65:299–301) by Hall et al., the rows in Table 1 are misaligned. The data in the second column (No. of patients) are aligned one row up, and there is a row missing under the Miscellaneous category, at the bottom, which should say ALS variant. Thus there are significant errors throughout the table. The correct table is provided below.

Table 1 Prior diagnoses given to patients with FXTAS

Diagnoses (% of total diagnoses given)	No. of patients*
Parkinsonism (24%)	
Idiopathic Parkinson disease	11
Atypical Parkinson disease	6
Multiple system atrophy	3
Parkinsonism plus	2
Extrapyramidal dysfunction	1
Tremor (20%)	
Essential tremor	15
Cerebellar tremor	1
Alcoholic tremor	1
Dystonic tremor	1
Tremor, unspecified	1
Ataxia (17%)	
Ataxia from strokes	3
Ataxia from cervical spine disease	2
Ataxia from pituitary tumor	2
Ataxia from lumbosacral radiculopathy	1
Ataxia from a car accident	1
Cerebellar ataxia	2
Olivopontocerebellar atrophy	2
Spinocerebellar degeneration	2
Cerebellar syndrome	1
Cerebellar degeneration	1
Dementia (13%)	
Dementia	6
Alzheimer disease	3
Vascular dementia	2
Binswanger disease	1
Multi-infarct dementia	1
Cerebrovascular disease (10%)	
Stroke	4
Multiple strokes	3
Transient ischemic attacks	2
Cognitive disorder secondary to cerebrovascular disease	1
Miscellaneous (16%)	
Depression	4
Peripheral neuropathy	3
Benign positional vertigo	2
Multiple sclerosis	1
Possible multiple sclerosis	1
ALS variant	1
Possible NARP	1
Psychogenic	1
Myasthenia gravis	1
Normopressure hydrocephalus	1
Total number of diagnoses	98

* Fifty-six persons with FXTAS were given a total of 98 prior diagnoses.

NARP = neurogenic weakness, ataxia, and retinitis pigmentosa.
