Dr. Bompreszi reports 2 young women who developed a demyelinating syndrome within 4 weeks of vaccination with Gardasil® and later met criteria for multiple sclerosis. This observation supplements previous reports on the concurrence of an inflammatory CNS disorder and administration of the HPV vaccine in 5 young women.² Contrary to our findings, 4 of these 5 patients had already presented with symptoms suggestive of a first demyelinating event prior to vaccination.

As the patients mentioned by Dr. Bompreszi also developed neurologic symptoms only after contact with the vaccine, it would be interesting to know their case histories in detail.

Brigitte Wildemann, Heidelberg, Germany

Disclosure: Dr. Wildemann received research support from the German Federal Ministry of Education and Research and research support and honoraria for speaking engagements or attendance of scientific meetings from Biogen Idec, Bayer Vital, Merck Serono, TEVA/Aventis, and Biotest.
