Genetic associations with brain microbleeds: Systematic review and meta-analyses

In the article "Genetic associations with brain microbleeds: Systematic review and meta-analyses" by S.S. Maxwell et al. (*Neurology*® 2011;77:158–167), there are several errors in figure 3 (the text of the article itself is correct). Please refer to the corrected figure below. The authors regret the errors.

Figure 3 Meta-analysis of the association between $\epsilon 2+$ vs $\epsilon 3/3$ genotypes and brain microbleeds (BMBs)

(A) BMBs in any location. (B) BMBs in strictly lobar or not strictly lobar locations. Notation as for figure 2. *Number of participants included in analysis. For some studies, where numbers of participants per genotype were not provided, we estimated the total number of participants with $\epsilon 2+$ or $\epsilon 3/3$ genotypes, assuming the distribution of the genotypes to be the average of the included studies with available data on each genotype. This provides a rough estimate of numbers of participants included in the comparison, but has no effect on the study-specific OR, standard error, or meta-analysis calculations. **Study used slightly different comparison groups ($\epsilon 2+$ vs $\epsilon 2-$). CI = confidence interval.
