R. Nabbout, S. Baulac, I. Desguerre, N. Bahi-Buisson, C. Chiron, M. Ruberg, O. Dulac, and E. LeGuern
Nabbout et al. identified a new locus for FS on 3p in a family with febrile seizures and childhood absence epilepsy. Patients with epilepsy shared another common haplotype at 18p. Epilepsy in association with FS might result from an interaction between a gene on 3p and a modifier gene on 18p.

1382 FAME 3: A novel form of progressive myoclonus and epilepsy
J.A. Carr, P.E. van der Walt, J. Nakayama, Y.-H. Fu V. Corfield, P. Brink, and L. Ptacek
Familial adult myoclonic epilepsies (FAME) are increasingly recognized. Carr et al. describe a novel South African form with cerebellar atrophy and cognitive impairment, associated with frequent seizures and significant disability.
