ted to the membership at the AAN annual meeting.⁶ The Practical Legal Issues for Neurologists course held at the AAN annual meeting each year from 2008 to 2011 featured lectures on what constitutes proper expert witness testimony, using the Expert Witness Guidelines.⁷⁻¹⁰ In addition, the AAN's Code of Professional Conduct (Code) contains a provision regarding legal expert testimony (6.4) that has been in place since the Board approved the Code in 1992.¹¹ Members have been subject to discipline by the AAN for violations of the Expert Witness Guidelines and the Code since adoption of the initial version of the Disciplinary Action Policy in 1992.

A history of professional standards and educational opportunities concerning expert witness testimony shows AAN's commitment to promoting proper expert witness testimony. Enforcement has been strengthened by eliminating past inefficiencies in the disciplinary process that may have frustrated complainants or prevented complaints from being submitted. In addition, although the Expert Witness Guidelines and Code have been published and posted online at aan.com/ethics, our article provides members with a more detailed explanation of the AAN's disciplinary process, including the potential types of disciplinary action.¹ Given the combination of increased awareness of AAN standards concerning proper expert witness testimony and the ramifications for violating those standards, we share Dr. Iverson's hope that the frequency of members offering improper expert witness testimony will diminish.

John C. Hutchins, St. Paul, MN; Murray G. Sagsveen, Bismarck, ND; Dan Larriviere, New Orleans, LA

Pilot trial of IOM duty hour recommendations in neurology residency programs: Unintended consequences

In the article "Pilot trial of IOM duty hour recommendations in neurology residency programs: Unintended consequences" by L. Schuh et al. (*Neurology*® 2011;77:883–887), there is an error in the Methods section. On page 884, the sentence in the second paragraph should have read: "Residents completed a VAS study-specific education satisfaction survey at the end of each study month; 0 cm indicated strong disagreement and 10 cm strong agreement with each survey statement." The authors regret the error.
