A prepontine subarachnoid abscess by *Escherichia coli*

A 53-year-old man had 6 months of intermittent fever and worsening headache, with 4/5 left hemiparesis and new unsteady gait, without other deficits. His immune status was normal, and he had self-treated with paracetamol-caffeine-aspirin powder. Two years prior he had purulent meningitis diagnosed by lumbar puncture with negative CSF culture, treated with ceftriaxone/vancomycin for 2 weeks.

Radiologic examination demonstrated a prepontine cystic mass (figure 1). Intraoperatively, the mass was purulent (figure 2); a few foam cells were seen on biopsy. Culture of fluid from the cyst revealed *Escherichia coli*. Recovery occurred after a 4-week course of meropenem.

*E coli* intracranial abscesses or subdural empyemas are infrequently reported.1,2 In our immunocompetent patient, a spontaneous prepontine subarachnoid *E coli* abscess was unanticipated.

*These authors contributed equally to this work as co–first authors.
From West China Hospital of Sichuan University, Chengdu, China.

Author contributions: All authors were involved in clinical care and investigative workup of the patient. Yanming Ren and Chao You drafted the manuscript. Xuesong Liu critically revised the manuscript.

Acknowledgement: The staff (Department of Neurosurgery, West China Hospital) performed the surgery and clinical care of the patient.

Study funding: No targeted funding reported.
Disclosure: The authors report no disclosures relevant to the manuscript. Go to Neurology.org for full disclosures.

Share Your Artistic Expressions in Neurology ‘Visions’

AAN members are urged to submit medically or scientifically related artistic images, such as photographs, photomicrographs, and paintings, to the “Visions” section of Neurology®. These images are creative in nature, rather than the medically instructive images published in the NeuroImages section. The image or series of up to six images may be black and white or color and must fit into one published journal page. Accompanying description should be 100 words or less; the title should be a maximum of 96 characters including spaces and punctuation.

Learn more at www.aan.com/view/Visions, or upload a Visions submission at submit.neurology.org.
