Figure MRI, surgery, tumor, and pathology of the lymphoplasmacyte-rich meningioma

MRI: T1-weighted (A), T2-weighted (B), and gadolinium contrast (C) of bilateral cerebellopontine angle (CPA); bilateral cerebellar tentorium (D); bilateral foramen magnum (E); falx cerebri and bilateral frontal base (F); falx cerebri, bilateral parietal lobe, bilateral cerebellar tentorium, and bilateral CPA (G); falx cerebri, bilateral cerebellar tentorium, and the right trigone area of the lateral ventricle (H); frontal base, cerebellar tentorium, and CPA (I); clival region and foramen magnum (J); postsurgery (white arrow) (K); surgery (white arrow) (L); hematoxylin & eosin (magnification, $\times 200$) (M); immunohistochemistry positive: epithelial membrane antigen (magnification, $\times 200$) (N), CD138 (magnification, $\times 200$) (O), immunoglobulin G4 (magnification, $\times 400$) (P).

A 47-year-old woman presented with a 6-month history of occipital-cervical region pain, numbness of both upper limbs, and progressive bilateral hearing loss. Enhanced MRI revealed a lesion involving the intracranial dura mater and the right trigone area of the lateral ventricle

(figure, A–J). Surgery to relieve the main symptoms was performed through a posterior midline approach (figure, K and L). Pathology suggested the diagnosis of lymphoplasmacyte-rich meningioma (figure, M–P). Lymphoplasmacyte-rich meningioma is a rare variant of meningioma and is categorized as a WHO grade I tumor and approximately 60 cases have been reported,¹ but involvement of the entire intracranial dura mater is unusual. It is characterized by dense lymphoplasmacytic infiltration and usually treated with surgical resection¹; however, total resection could not be achieved in our case. The patient received radiotherapy and postsurgery MRI at 3 months but demonstrated no progress.

Author contributions

Xiang Yang: study design, data collection and analysis, drafting the manuscript, revising the manuscript. Jun Le: data collection,

drafting the manuscript, revising the manuscript. Xin Hu: acquisition of data, analysis and interpretation of data. Yuekang Zhang: study concept and design. Jiagang Liu: in charge of surgery, clinical care and investigative workup of the patient, study concept and design, and revision of manuscript.

Study funding

No targeted funding reported.

Disclosure

The authors report no disclosures relevant to the manuscript. Go to Neurology.org/N for full disclosures.

Customize your online journal experience by signing up for e-mail alerts related to your subspecialty or area of interest. Access this free service by clicking on the “My Alerts” link on the home page. An extensive list of subspecialties, methods, and study design choices will be available for you to choose from—allowing you priority alerts to cutting-edge research in your field!

AAN Leadership Program Opportunities

Applications are open for four one-of-a-kind AAN Leadership Program opportunities. Apply by June 4 at AAN.com/view/Lead.

- **Emerging Leaders**
Designed to identify, engage, and mentor early career members who are committed to professional, community, and society leadership.
 - **Transforming Leaders**
Designed to identify and develop talent among experienced members.
 - **Practice Leadership**
Designed to develop and hone the kind of unique leadership skills critical for today’s practicing neurologist to succeed and flourish.
 - **Women Leading in Neurology**
Designed to identify, engage, and mentor mid-career female member neurologists who are committed to professional, community, and society leadership.
