Author Tip

Neurology recently adopted the following policy in support of the movement to promote data transparency: Data not provided in a *Neurology* article because of space limitations must be made available in a trusted data repository or shared at the request of other investigators for purposes of replicating procedures and results. *Neurology* has created a mechanism for editors and peer reviewers to review data deposited in the Dryad public repository at the time of manuscript submission. Authors will pay a nominal fee for depositing data in a public repository (waivers exist for submissions from authors based in countries classified by the World Bank as low- or middle-income economies).

Stroke affects more than just the physical

A new study looks at what problems affect people most after a stroke and provides a broader picture than what some may usually expect to see. "After a stroke, people who have only mild disability can often have hidden problems that can really affect their quality of life," said study author Irene L. Katzan, MD, MS, of the Cleveland Clinic in Ohio and a member of the American Academy of Neurology. "And for people with more disability, what bothers them the most? Problems with sleep? Depression? Fatigue? Not many studies have asked people how they feel about these problems, and we doctors have often focused just on physical disability or whether they have another stroke."

Katzan IL, Thompson NR, Uchino K, Lapin B. *Neurology* 2018;90:e1364–e1371. doi.org/10.1212/WNL.0000000000005327
