Innovation in Care Delivery: A resource for developments in neurology care delivery

The Innovation in Care Delivery section is a resource/repository for developments relating to care delivery in neurology.

Interview series with neurologists in care delivery administrative roles

Drs. Callaghan and Kerber periodically interview neurologists in care delivery administrative roles. Interviewees comment on issues both at the local and national levels.

Ralph L. Sacco, MD, MS, Chairman and Professor of the University of Miami Miller School of Medicine Department of Neurology, President of the American Academy of Neurology, Director and Principal Investigator of the University of Miami Clinical and Translational Science Institute, Executive Director of the Evelyn F. McKnight Brain Institute.

Dr. Sacco talks about his leadership role in balancing the needs of neurologists, the department, and other stakeholders with the needs of patients. He outlines successful approaches to improving patient access to quality care, the challenges in implementing these approaches, and what he sees as the future in care delivery.

S. Claiborne Johnston, MD, PhD, Dean, Vice President for Medical Affairs of the Dell Medical School University of Texas at Austin. Dr. Johnston has served as the inaugural Dean of the Dell Medical School since March of 2014. He is also a neurologist specializing in stroke care and research and holds a PhD in epidemiology. Prior to his position in Austin, he was associate vice chancellor for research at the University of California, San Francisco, where he directed the Clinical and Translational Science Institute. While there, he founded the UCSF Center for Healthcare Value, working to improve care quality while decreasing costs.

Dr. Johnston talks about his leadership role in promoting and facilitating change in care delivery, specifically regarding value-based models for reimbursement, investing in structures that support this, and redesigning care to fit the model.
