Author Tip

An important part of publishing is promoting your work. Using popular sites like Facebook and Twitter is a fast, free way to share your work with a wide audience. Use hashtags so your posts can be found easily (e.g., #Neurology or #Parkinsonsdisease). Users following those hashtags will see your posts, when they otherwise might not have. Using images tends to draw people in more than plain text. If you are interested in having *Neurology* promote your published article on our channels, or would like to learn more about using social media, please contact msorenson@neurology.org.

Can diet help reduce disability, symptoms of MS?

For people with multiple sclerosis (MS), eating a healthy diet of fruits, vegetables, and whole grains may be linked to having less disability and fewer symptoms than people whose diet is less healthy. "While this study does not determine whether a healthy lifestyle reduces MS symptoms or whether having severe symptoms makes it harder for people to engage in a healthy lifestyle, it provides evidence for the link between the two," said study author Kathryn C. Fitzgerald, ScD, of Johns Hopkins School of Medicine in Baltimore, Maryland, and a member of the American Academy of Neurology.

Fitzgerald KC, Tyry T, Salter A, et al. *Neurology* 2018;90:e1–e11.
