Author Tip

A hybrid open access (OA) option is offered to authors whose full-length articles or reviews have been accepted for publication (not all manuscript categories are eligible for this option; please contact the Editorial Office for details). Authors submitting work to *Neurology* will be given the opportunity to select the OA option at the revision stage of the peer review process, contingent upon acceptance of the paper. This choice has no influence on the peer review and acceptance processes. These articles are subject to the standard peer review process and will be accepted or rejected based on their merit. Article Processing Charge depends on the type of funding. For more information, please see neurology.org/site/misc/oa_faq.xhtml.

Does age at menopause affect memory?

Entering menopause at a later age may be associated with a small benefit to memory years later. "This study suggests that lifelong hormonal processes, not just short-term fluctuations during menopause, may be associated with memory skills," said study author Diana Kuh, PhD, FFPH, FMedSci, of the University College London in the United Kingdom. Kuh noted that the relationship between the age at menopause and memory scores was not affected by use of hormone therapy.

Kuh D, Cooper R, Moore A, Richards M, Hardy R. 2018;90:e1673–e1681. doi.org/10.1212/WNL.0000000000005486
