About the *Neurology* Resident & Fellow Section

This section, developed for the trainee readership, will keep you up to date on issues related to training and career considerations as well as support the development of lifelong learning skills. This section is trainee-run: a team of residents and fellows is responsible for writing, reviewing, editing, and publishing articles of interest to trainees. The team is also responsible for initiating and developing other unique projects, including podcasts, electronic communications, the Resident & Fellow website, and new subsection ideas. Weekly e-Pearls, or electronic pearls, have been sent to residents nationwide since July 2008. An archive of e-Pearls can be found at n.neurology.org/epearls/archive.

Half of those on Parkinson drugs may develop impulse control problems

Over time, half of the people taking certain drugs for Parkinson disease may develop impulse control disorders such as compulsive gambling, shopping, or eating. “Our study suggests that impulse control disorders are even more common than we thought in people who take dopamine agonists,” said study author Jean-Christophe Corvol, MD, of the ICM Brain and Spine Institute, Pitié-Salpêtrière Hospital, Assistance Publique–Hôpitaux de Paris, Sorbonne University, Paris, France. “These disorders can lead to serious financial, legal, and social and psychological problems.”
