Figure

Residents are the backbone of medical systems across the world. When coronavirus 2019 (COVID-19) arrived, neurology training programs were disrupted, but without hesitation, residents put on masks and continued to care for patients (Figure).

This sketch is a tribute to neurology residents across the globe for their resilience and courage in the throes of a pandemic. Residents have isolated themselves from family, delayed training, and worked longer hours while remaining true to the pursuit of excellence and compassion in neurologic care. This piece recognizes and memorializes how neurology residents have adapted to working in a pandemic and propped up our health systems.

Acknowledgment

The author thanks her residency program members who let her draw them for this piece, every essential worker, and the people who are staying home to reduce the spread of COVID-19.

Study funding

No targeted funding reported.
