Author Tip

Neurology open access policy

A hybrid open access (OA) option is offered to authors whose full-length articles or reviews have been accepted for publication (not all manuscript categories are eligible for this option; please contact the Editorial Office for details). The authors submitting work to *Neurology* will be given the opportunity to select the OA option at the revision stage of the peer-review process, contingent upon acceptance of the paper. This choice has no influence on the peer-review and acceptance processes. These articles are subject to the standard peer-review process and will be accepted or rejected based on their merit. Article Processing Charge depends on the type of funding. For more information, please see NPub.org/OAFAQ.

Vitamin D twice a day may keep vertigo away

Taking vitamin D and calcium twice a day may reduce your chances of getting vertigo again. Benign paroxysmal positional vertigo happens when a change in the head position gives you a sudden spinning sensation. Treatment includes a doctor performing a series of head movements that shift particles in the ears that cause the vertigo, but the condition tends to recur frequently. "Our study suggests that for people with benign paroxysmal positional vertigo, taking a supplement of vitamin D and calcium is a simple, low-risk way to prevent vertigo from recurring," said Ji-Soo Kim, MD, PhD, of Seoul National University College of Medicine in Korea. "It is especially effective if you have low vitamin D levels to begin with."
