A 56-year-old man complained of hypesthesia in the right lower extremity for 2 months. The same symptoms gradually involved the left lower extremity. Recent onset of dysuria was reported. Physical examination revealed diminished tendon reflexes in both lower extremities and diminished superficial and position sensation in the groin. MRI revealed a vascular malformation, ranging from T9 to L1 (figure). Spinal vessel digital subtraction angiography indicated a spinal dural arteriovenous fistula in the arteria radicularis magna arising from the right L1 intercostal artery and an intradural perimedullary arteriovenous fistula arising from the vertebral artery at C2 (video 1).

Study funding

No targeted funding reported.

Disclosure

The authors report no disclosures relevant to the manuscript. Go to [Neurology.org/N](https://www.neurology.org/N) for full disclosures.

Figure Magnetic resonance angiography of the vascular malformation

The vascular malformation ranged from T9 to L1.

From the Department of Neurosurgery, First Affiliated Hospital of Anhui Medical University, Hefei, China.

Appendix Authors

Name	Location	Contribution
Xuefeng Tian, MM	First Affiliated Hospital of Anhui Medical University	Main surgical operator and data collection
Xing Zhang, MD	First Affiliated Hospital of Anhui Medical University	Main surgical operator and director

Appendix (continued)

Name	Location	Contribution
Lei Ye, MD	First Affiliated Hospital of Anhui Medical University	Drafting and revision of the manuscript
Hongwei Cheng, MD	First Affiliated Hospital of Anhui Medical University	Decision maker for the surgical method and revision of the manuscript

New, Free Mobile Learning App Offers Complimentary Self-assessment CME

The American Academy of Neurology is pleased to offer a new, mobile educational resource—free to AAN members! The Neurology Question of the Day mobile app offers a quick, convenient, and fun way to assess your knowledge and fulfill self-assessment CME requirements. Get started at AAN.com/QODapp.

Call for Biostatisticians to peer review for *Neurology*[®]

We are seeking qualified experts to review the biostatistical aspects of submitted articles. We welcome those specializing in biostatistics with a background in experimental design and the review of randomized clinical trials, observational studies, genetic studies, and imaging studies in the neurodegenerative diseases.

If interested, please send CV to the Neurology Editorial Office: journal@neurology.org.

Disputes & Debates: Rapid online correspondence

The editors encourage comments on recent articles through Disputes & Debates:

Access an article at Neurology.org/N and click on “MAKE COMMENT” beneath the article header. Responses will be posted as rapidly as possible.

Before submitting a comment to Disputes & Debates, remember the following:

- Disputes & Debates is restricted to comments about articles published in *Neurology* within the last 8 weeks
 - Read previously posted comments; redundant comments will not be posted
 - Your submission must be 200 words or less and have a maximum of 5 references; the first reference must be the article on which you are commenting
 - You can include a maximum of 5 authors (including yourself)
-
