Figure Spinal Cord MRI

MRI in the acute phase demonstrated a longitudinally extensive T2 hyperintensity lesion extending from the lower medulla oblongata to the thoracic level (A, B, arrows) and a linear strip corresponding to the anterior gray matter after gadolinium enhancement (C, D, arrows). MRI in the recovery phase demonstrated the pencil-like T2 hyperintensity on sagittal views corresponding with the “snake-eye” appearance on axial planes (E, F, arrows), without any enhancement (G, H).

A 15-year-old boy with a maternal family history of “optic neuropathy” presented with acute flaccid paralysis in both upper limbs. Cervical MRI demonstrated longitudinally extensive T2 lesions, with significant enhancement of the anterior gray matter. Typical “snake-eye” appearance was observed in the follow-up MRI 1 month later (Figure). Analysis of blood mt-DNA revealed a homoplasmic m.14495T>C mutation, confirming the diagnosis of Leber hereditary optic neuropathy (LHON). Idebenone 900 mg/d was given to him, and he recovered completely 3 months later.

Spinal cord involvement was rare in LHON.¹ The enhancement pattern in this case mimicked spinal cord infarction rather than demyelinating diseases.²

Study Funding

The authors report no targeted funding.

Disclosure

The authors report no disclosures relevant to the manuscript. Go to [Neurology.org/N](https://www.neurology.org/N) for full disclosures.

Appendix Authors

Name	Location	Contribution
Bing Zhao, MD	Department of Neurology, Qilu Hospital of Shandong University (Qingdao)	Drafting/revision of the manuscript for content, including medical writing for content
Yuan Sun, MD	Department of Neurology, Qilu Hospital of Shandong University (Qingdao)	Analysis and interpretation of data

Appendix (continued)

Name	Location	Contribution
Yong Qing Zhang, MD	Department of Neurology, Qilu Hospital of Shandong University (Qingdao)	Major role in the acquisition of data
Chuanzhu Yan, MD, PhD	Department of Neurology, Qilu Hospital of Shandong University (Qingdao)	Study concept or design

Subspecialty Alerts by E-mail!

Customize your online journal experience by signing up for e-mail alerts related to your subspecialty or area of interest. Access this free service by clicking on the “My Alerts” link on the home page. An extensive list of subspecialties, methods, and study design choices will be available for you to choose from—allowing you priority alerts to cutting-edge research in your field!

Online Learning for Everyone

No matter your career stage, interest, or learning style, the AAN has a wide variety of convenient online CME, self-assessment, and other learning activities to suit your needs. From bite-sized learning opportunities to self-assessment programs, help preparing you for the boards or continuing certification, or on-demand access to popular AAN conferences, the AAN has you covered. Visit [AAN.com/Learn](https://www.aan.com/Learn) today.

Submit Your Work to *Neurology*[®] *Neuroimmunology & Neuroinflammation*

Neurology[®] *Neuroimmunology & Neuroinflammation*, edited by Josep Dalmau, MD, PhD, FAAN, wants to review your research for publication! This online-only, open-access journal publishes rigorously peer-reviewed reports of research in this area affecting the full range of neurologic diseases. The journal’s Impact Factor is 8.485.
